

## Getting Started

Welcome to Texthelp's new PDF Reader. Use this new extension to read PDF files in Google Drive, the web, or your local hard drive.

After installing the extension, get started in Google Drive by simply right clicking a PDF file and choosing "Open with" followed by Read&Write for Google Chrome™.

You can also make Read&Write your default PDF viewer by going to Google Drive settings and choosing Manage apps, then check "Use by Default"

Opening PDF files with Texthelp's PDF Reader allows you to use Texthelp's Read&Write toolbar to

- Read text aloud
- Look up words in the Dictionary and Picture Dictionary
- Translate words
- Add text annotations using Word Prediction
- Highlight text
- Build vocabulary lists
- And more!

There are also powerful collaboration tools to take your PDF experience to the next level.

- Collaborate in real time on PDFs shared in Google Drive
- Add and reply to text comments (just like in Google Docs!)
- Add images and links
- Leave audio comments using only your voice

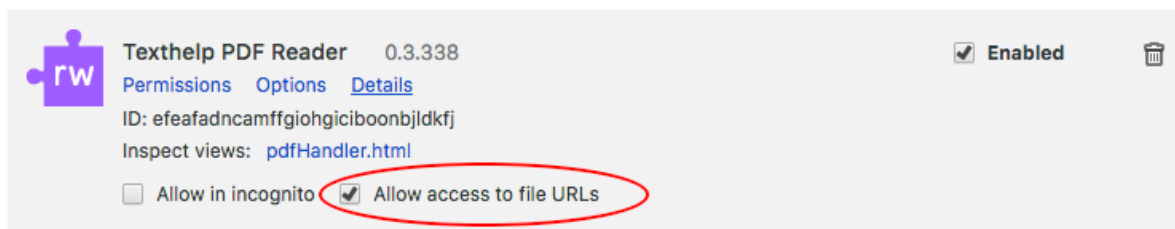

## Opening PDFs from the web

To open a PDF from the web, simply click on any link to a PDF file and it will open in Texthelp's PDF Reader.

## Open PDFs from your local hard drive

To open a PDF from your local hard drive you must first allow the extension to access local file URLs. Access your extensions in Chrome by typing <chrome://extensions/> in the URL bar, or choosing "More Tools - Extensions" from Chrome settings.

Once the settings page is open, search for Texthelp PDF Reader and check "Allow access to file URLs".

Now you can open local PDFs by dropping them into an empty tab in Chrome, or choosing "File - Open File" from the Chrome menu.
